

NEWS RELEASE

Aeturnum Partners with Pentaho

Leading Provider of IT Consulting and Services to Deliver Complementary Technology and Value-Added Services for the Pentaho Open BI Suite

Westford, MA, February 19, 2008 - Aeturnum, Inc. (www.aeturnum.com) an emerging provider of IT consulting and software product development services, has joined the Pentaho Partner Program as a Certified Partner. Aeturnum will provide value-added services and pre-built packaged solutions around the Pentaho Open Business Intelligence (BI) Suite for the finance, banking, telecommunications, retail, utilities and technology industries. Users will benefit from comprehensive analytics and data mining capabilities designed specifically for their business while also lowering their total cost of acquisition and ownership.

Aeturnum will provide value-added services around the Pentaho Open BI Suite as part of its systems integration and consulting services. It will also integrate the software into its Athiva™ software development platform. Athiva provides a flexible architecture that incorporates best practices in application development and combines common services and business logic to accelerate the development of enterprise applications. The Pentaho Open BI Suite adds comprehensive open source business intelligence and data mining capabilities to the Athiva platform.

“Business intelligence is a core component of most packaged and custom-built enterprise applications,” said Erik Hoogerhuis, vice president of business development at Pentaho. “By combining its best practices in software implementation and development with the Pentaho Open BI Suite, Aeturnum will be able to offer users robust business intelligence and data mining capabilities that will increase users’ flexibility while lowering their total cost of ownership.”

Deployment of comprehensive proprietary business intelligence (BI) solutions are typically very expensive due to high software licensing costs, project complexities and the resulting project overruns. As a result, users have a difficult time realizing short term ROI and managing long-term costs. Pentaho packages rich data mining functionalities in a commercial open source business intelligence solution to enable users to gain valuable insights into their business more cost-effectively.

Aeturnum has been providing high-value business intelligence solutions to Fortune 500 organizations for over 7 years. It has also developed a special niche in 'productizing' business intelligence solutions for independent software providers through its Athiva software development platform. With the Pentaho Open BI Suite, Aeturnum will be able to further strengthen both its business intelligence solution and related service offerings.

"Many IT organizations expend valuable time and capital developing and integrating business intelligence capabilities," said Rajat Bhakri, president and CEO at Aeturnum. "By combining our best practices in deployment and development with the robust business analytics and data mining capabilities in Pentaho's Open BI Suite, we can help users quickly discover strategic high-value data points within large volumes of data, while substantially lowering their total cost of ownership."

About Pentaho

Pentaho Corporation is the commercial open source alternative for Business Intelligence (BI). Pentaho Open BI Suite provides comprehensive reporting, OLAP analysis, dashboards, data integration, data mining and a BI platform that have made it the world's leading and most widely-deployed open source BI suite. Pentaho's commercial open source business model eliminates software license fees, providing support, services, and product enhancements via an annual subscription. In the years since Pentaho's inception as the pioneer in commercial open source BI, Pentaho's products have been downloaded more than 3 million times, with production deployments at companies ranging from small organizations to The Global 2000.
